The advent of antibiotics was a quantum leap in our capabilities to treat infections. Their success merited the nickname “miracle drugs”. However, the miracle may not last forever. Pathogenic bacteria learned to resist the action of antibiotics and are becoming resistant faster than new antibiotics are found or created. The situation has become a sort of an arms race. Can we win or at least keep up?

Monday, March 21st
11:00 am - 1:30 pm
TSU Pavilions ABC

Reception follows lecture
