Achieving Health Equity Through Community-Based Participatory Research

Sora Park Tanjasiri
Department of Health Science

At the core of public health is the facilitation of concerted community efforts for the improvement of population health. Community-based participatory research (CBPR) offers a conceptual and logistical approach to improving the responsiveness of research institutions to address root causes of enduring health disparity problems. Dr. Sora Park Tanjasiri will discuss the application of CBPR to address the continuum of cancer control research needs, and share illustrations from work with Asian American and Pacific Islander communities throughout the region.
