Tool Talk

Leslie Bruce,
WAC LIAISONS

Fast Facts

- Google's NotebookLM can be used by students and faculty alike to learn quickly about any subject.
- It addresses four common complaints about AI language models:
 1. EQUITY: The tool is currently FREE.
 2. PRIVACY: "We do not use any of the data collected to train new AI models."
 3. GROUNDED, RAG-style tool. This chatbot only answers questions using the documents you provide = fewer "hallucinations," greater accuracy.
 4. HUGE CONTEXT WINDOW: upload almost 25 million words from documents, videos, slides, and more.
- Weaknesses (e.g., oversimplifications, inability to synthesize) can be critical thinking opportunities.
